

Beginning with HABITAT
An Approach to Conserving Maine's Natural Space for Plants, Animals, and People

Supplementary Map 5
Public and Conservation Lands
Town of Calais

This map is non-regulatory and is intended for planning purposes only.

LEGEND

Protected parcels depicted on this map represent the most complete information available from the State of Maine database at the time of map creation. The State of Maine's conserved lands database includes lands in federal, state, and non-profit ownership. This database does not include many privately owned conservation lands, especially those protected by local land trusts. This database also does not typically include municipally owned conservation lands. For the most accurate and current information about land ownership, consult with the local assessor and/or other local management agencies. If public access potential is uncertain, landowners should be contacted to determine if permission is necessary.

Parcels are transparent to show aerial image below. Aerial imagery is often the best tool available to visualize existing patterns of development and resulting changes in the natural landscape. These aerial photos, when used with other Beginning with Habitat maps, can provide a more complete understanding of existing conditions and potential habitat values. By depicting conserved lands with aerial photos, the map user can more easily identify adjacent undeveloped lands that could be conserved to expand the size and ecological effectiveness of the protected habitat.

Different types of aerial imagery are available for different parts of Maine. The medium (color vs. black & white), resolution (pixel size), and age affect how useful an image is for discerning landscape features. Pixels are the "grains" that make up the image; the larger the pixel, the "fuzzier" the image. The image types currently available for Maine are described below. The best image available for the area shown in this map was used. High quality images that are only partially available may be overlapped on lesser quality images.

Ownership Type (transparent layers)

- Federal**
National parks, forests, and wildlife refuges. Most of these properties have management plans based on a comprehensive public comment process and cooperative efforts between local users and stakeholders. Federal lands in Maine are managed from local and regional offices.
- State**
Wildlife Management Areas and other properties managed by the Department of Inland Fisheries and Wildlife, state parks, and parcels managed by the Bureau of Parks & Lands. Management of most of these lands is guided by plans usually created through a comprehensive public comment process.
- Municipal**
Town parks, athletic fields, community forests, etc. Many towns have management plans for their large, forested parcels. Not all forested town lands should, however, be considered conservation lands; there may be no permanent protective measures to preclude a town forest from being developed.
- Private Conservation**
Properties owned and managed by private (usually non-profit) organizations such as The Nature Conservancy, Maine Coast Heritage Trust, Trust for Public Land, and local land trusts. These properties often are managed for specific ecological goals and many properties have management plans.
- Easement**
Voluntary legal agreements that allow landowners to permanently restrict the amount and type of future development and other uses on all or part of their property as they continue to own and use it. Landowners may sell or donate easements. Once in place, easement requirements pass from one owner to the next. Easements are held by a town, land trust, or similar entity that is responsible for monitoring the land for compliance with the terms of the easement.
